

TEXAS ELECTRONIC RESOURCES, INC

Technology must support a rapidly changing, interdependent market, which is why Texas Electronic Resources, Inc, (TER) offers a full range of electronic products, systems and communications support for all types of industrial activities. Since its establishment in 1984, TER has been known for expertise in developing products that function efficiently in harsh environments, as well as the ability to provide integrated control over both engineering and manufacturing aspects of electronic system development. Headquartered in Houston, Texas, TER serves clients worldwide through an infrastructure that includes comprehensive access to product and system components.

Sophisticated technology for domestic and international clients

In the area of oil and gas automation, TER's product offerings have centered around artificial lift enhancement. TER Rod Pump Controllers, installed in the Permian Basin of West Texas in 1987, have saved clients thousands of dollars in reduced electrical and maintenance costs. A solar powered TER Gas Injection Wellhead Monitor for remote control of offshore gas lift operations has been successfully used at Lake Maracaibo, Venezuela for more than three years, and a modified version of this wellhead monitor is now used in Russia-with a TER produced Hand Held Flow Computer-to simplify manual gas lift operations.

Another TER product, which enhances man/machine interface applications, is a display panel for installation in indoor and outdoor locations. This unit offers a rugged, low-cost alternative for system integrators and can be utilized either as a dumb terminal or an intelligent data access device to Programmable Logic Controllers. Certification for use in hazardous environments also is available.

To provide an effective computer matrix, software for use with all products and systems is constantly generated and supported by TER. Capabilities include embedded system design as well as personal computer style graphical user interfaces. Complex remote control aspects are routinely handled by TER engineers.

Broad product spectrum

The products developed by TER range from small items such as transient protectors to complete process control systems supported by telemetry and computer programs. In fact, lightning protection of omnipresent instrumentation transmitters has been a TER specialty since its beginning. Protectors for most major transmitter manufacturers are available, and thousands of these field proven devices have been sold for use in widely diverse locales.

Customized products and services

A distinct advantage enjoyed by TER clients is that TER modifies products to meet the needs of the client's in-house environment. Rather than expecting the client to adapt to existing products, the TER corporate philosophy is, "if the existing product does not fit the application, let us offer a modified alternative." This approach assures the flexibility that is one of the distinguishing features of TER products and services.

With a track record of proven excellence, Texas Electronic Resources, Inc. is dedicated to serving the industry with continually evolving products and services. For more information, contact Sales at (713) 568-5274, fax information requests to (713) 568-5280, write to Texas Electronic Resources, Inc., 11011 Brooklet, #220, Houston, Texas 77099; or email us at ter@ter-usa.com. □
